*Sprinkler - Computer - Television - Telephone wires.*

Protect any low voltage wiring from service interruptions with the **Exterior Utility Guard**.

The new **Exterior Utility Guard** provides protection for low voltage exterior utility lines at the strike zone. This is the vulnerable point at which utility wires come from the underground to the building. It simply slips over the existing conduit or wires to prevent damage caused by trimmers and other destructive forces. It can be installed without service interruption. Give your customers additional confidence in your company and peace of mind that their low voltage wiring is protected by the **Exterior Utility Guard**.
